Almatris Exhibits at Ceramics Expo, May 2 & 3, Novi, MI, USA

Almatris will showcase their higher purity aluminas at the upcoming Ceramics Expo show at the Suburban Collection Showplace, Novi, Michigan, USA. This Almatris specialty product line of XLS (X-tra Low Soda) and ULS (Ultra Low Soda) offer an aluminum oxide content of up to >99.95%. In unground or super ground form, these new products are ideal for technical and advanced ceramic applications where high sintered density and low impurities are necessary.

Co-located with the Thermal Management Expo, Almatris will also share details of their newest, specially designed alumina fillers to yield higher performance in thermal interface applications. The ThermaFill product line allows a higher filler loading and the potential to further increase thermal conductivity. ThermaFill products are the economic solution for basic functional filler applications and are available in a surface treated version for increased solids loading.

Almatris aluminas enable the development of next-generation technologies. Building on over 100 years of R&D into alumina, Almatris offers the most comprehensive portfolio: calcined aluminas, low soda aluminas, extra & ultra-low soda aluminas, continuous and batch ground aluminas, tabular alumina and more.

The Americas technical experts will be on hand in Novi to guide ceramics firms in the optimal usage of Almatris premium aluminas. Visit at booth no. 1120.
